

Third Project Description

The third project is called the LGU Lupao HRMO File Locator Search System. It is a Java Application that can search anywhere using two searches: the list of combo box and the Search bar to find in the table list that you can find. It has many features: the login form, the verification form, the Registration form, the Search System, and lastly, the Tracker form. First, when a new user login will have to go registration form to have a Username and password. Then, after that, go to the login form. Type the username and password then will appear the verification form will appear to type your email and click send code. After that it will appear the search system. The search has three labels called the file name, cabinet number, and box number, where you can type what label you want. It has 4 buttons called the Add, Delete, Update, and Reset. The add button is when you type the label, then will appear in the table that you type. The Delete button is to delete the label in the table that you typed. The Update is when you click the list of book numbers in the combo box will appear in the three labels, then type it and click update to finish it. Finally, the last button called reset is when the book numbers are disarranged, then it will reset them in order. Last is when you've done it, then go to the tracking system button. It has 4 labels called Username, Name of Employee, Action Doing in Library form, and Date. This is to type it and save it, then it will appear on the table. The 5 buttons are called save, delete, log out, reset, and Back to Library form. The Save, delete, reset is the same as the search system, while the logout is to go to the login form after you've done it, and the Back to Library form is when you have forgotten something, then click the button, then it will appear the Library form.
